DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

- a. Delete the abstract filed on 04/28/2004 and substitute with the following:
A first positioning step positions and fixes a light focusing element and a polarization converting element. A beam introducing step introduces beams to a beam splitting element, the light focusing element and the polarization converting element. An optical image forming step detects an optical image through the above elements. An illumination-area comparing step performs an image processing on the detected optical image to compare an illumination area formed by the optical image with a designed illumination area. A beam-splitting-element position-adjusting step adjusts the position of the beam splitting element.

Allowable Subject Matter

2. ~~Claims 1-10 are allowed.~~
3. The following is an examiner's statement of reasons for allowance:

First adjusting a relative position on a predetermined optical path of the light focusing element and the polarization converting element on the basis of the shapes thereof, and fixing the position of the light focusing element and the polarization converting element, introducing a beam on the light focusing element and the polarization converting element of which position is adjusted during the first adjusting and the beam splitting element disposed on the predetermined optical path (claim 1); and an element holding member to hold the light focusing element and the polarization converting element which are positioned and fixed by adjusting their relative position on the basis of the shapes thereof on a predetermined optical path, a position adjusting unit to adjust the relative position of the beam splitting element with respect to the light focusing element and the polarization converting element (claim 10), cannot be made inherent or obvious by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Hashizume et al. (US Patent Number 6,092,901) discloses a polarizing illuminating device and projection display device.

Watanabe (US Patent Number 6,460,998 B1) teaches an adjustment mechanism and projector employing the same.

Ogawa et al. (US Patent Number 6,491,397 B2) shows an illumination optical system and projector using the same.
